## PROJECTS

### Online Report Creation Tool –

- This tool makes report creation work easier.
- By creating template of report and use image processing on that template for finding text and replacing the text with some other text, so if requirement of report changes then changes can be made easily and quickly.

### HelloBoot (A SpringBoot Replica) –

- This framework free user from writing servlet code.
- User only needs to create server side services just by annotating them with path.
- This framework can handle GET, POST request and has feature of Inversion of Control.

### HTTP Server in PYTHON –

- HTTP Server listens on server port number for request and send response back to client.

It can do SERVER-SIDE PROCESSING and can serve HTML, CSS, JS, IMAGE FILE.
